

Noise Barriers Announces Launch of the QuietSwing® QuietFold Bi-Parting Door Series

Lake Forest, IL – April 14, 2022 – [Noise Barriers](#), a leading manufacturer of noise control products serving the industrial and architectural markets, is proud to announce the launch of the [QuietSwing® QuietFold Bi-Parting Door Series](#). Doors in the line offer enhanced security with a locking system spread over multiple points on a sliding track.

QuietSwing® QuietFold Doors are available with four or six-hinge leaves and allow for openings ranging between 12 and 40 feet. This flexibility, combined with their modern appearance and acoustical performance, makes them optimal for concert halls, production spaces, churches, schools, and in applications where noise reduction is required, flexible operation is desired, and space restrictions exist.

“The design of our new bi-parting doors is based on our highly effective double seal QuietSwing doors,” explained Noise Barriers Director John Finnegan. “We’re excited to bring this new series to market and expect that it, too, will be highly sought after.”

The systems are available in STC 50, 52, and 54 and arrive with acoustic seals, all hardware and glazing, if required. The result is a fully assembled door that leaves the factory truly ready to install.
